upstox

Position: Software Development Engineer (Full Stack)
Location: Bengaluru/Mumbai
Type: Intern + Full-Time

About Upstox
Upstox is one of India's leading Fin-Tech companies focused on simplifying trading and investing for the masses. We provide a state-of-the-art trading & investment platform offering multiple asset categories including Stocks, Digital Gold, IPOs, and Mutual Funds with commission-free pricing.

Our growth story showcases our impact - from 25,000 customers in 2017 to over 4 million customers currently, representing phenomenal growth of 800% (2017-2019) and 1500% in 2020 alone. Founded in 2009 by Ravi Kumar and Shrinivas Viswanath, with Kavitha Subramanian joining as the third co-founder in 2016, we're backed by notable investors including Ratan Tata, Kalaari Capital, and Tiger Global Management.

Role Overview
We're seeking talented engineers to join our Formula-1 style team where every millisecond counts. You'll work on building highly scalable systems and contribute to innovative solutions that shape the future of fintech in India.

Core Responsibilities
• Design and develop efficient, scalable web applications used by millions
• Build and maintain features for both frontend and backend systems
• Create, test, and optimize user interface components and server-side logic
• Collaborate with Product, Design, and Engineering teams for feature development
• Implement and maintain APIs meeting technical and consumer needs
• Participate in code reviews and write testable, maintainable code
• Investigate and resolve production issues
• Ensure cross-platform optimization and responsiveness

Technical Requirements
• Bachelor's degree in Computer Science or related field
• Strong foundation in JavaScript, HTML, and CSS
• Knowledge of the React.js ecosystem (Redux, Webpack, Enzyme)
• Understanding of Java and Spring Framework
• Familiarity with databases (MySQL, Oracle, MongoDB)
• Excellent verbal communication skills
• Good problem-solving skills.
• Attention to detail.
